**ADDITIONAL I-CAR® ENHANCED DELIVERY TRAINING PROGRAMS  
NOW OFFERED**

ROLLING MEADOWS, IL – May 14, 2001 – I-CAR continues to introduce new Enhanced Delivery training programs and is on track to replace all traditional courses with Enhanced Delivery by the beginning of 2003.

The Enhanced Delivery curriculum is a series of individual, modularized training programs that offer in-depth coverage of traditional and new subject areas. This allows students to choose only the segments which best fit their training needs. Enhanced Delivery programs feature knowledge and performance-based training, with an increased emphasis on hands-on exercises. Students also receive a CD-ROM, which includes the textbook, instructor audio track, and video demonstrations of the classroom exercises for later review and reference.

Among the programs recently introduced are Damage Analysis Program 1, which focuses on estimating vehicle damage and writing a damage report; Heating and Cooling Systems Program 1, which examines the part terminology, operation, diagnosis and repair of heating and cooling systems; and Electrical & Electronics Program 1, which allows participants to construct different types of circuits and measure circuit values.

Also available are Welding and Cutting Aluminum Programs 1, 2, 3 and 4. This series provides instruction on the principles of aluminum GMA (MIG) welding in Program 1, allows students to practice a variety of welds in Program 2, and offers a hands-on welding qualification test in Program 3. Program 4 focuses on aluminum TIG welding.
